**Status:** Begun

114th Avenue SE and SE 8th Street

This project funds the completion of design for capacity and pedestrian/bicycle safety improvements at the intersection of 114th Avenue SE and SE 8th Street. The proximity of this intersection to I-405 creates a heavy traffic demand. The 114th Avenue corridor is currently very active with multiple redevelopment opportunities in the planning stage. This development, the adjacency of a Park & Ride lot, nearby recreational opportunities the link in the Lake Washington Loop Trail all drive the need for intersection capacity and safety improvements. Traffic modeling analysis has shown that the addition of an additional southbound lane and associated intersection modifications provide significant benefit by reducing traffic delay at this intersection.

Expenses

Budget to Complete

\$4.9M
