

Budget to Complete  
\$4.4M

This program funds capital transportation improvements throughout the City to address mobility operation issues and concerns. Typical projects include new crosswalk installations, sign upgrades, channelization improvements, access management improvements, new bike lanes, bicycle wayfinding signage, and sidewalk and new curb ramp installations. This program implements pilot projects using new, innovative traffic control devices and evaluates their effectiveness as well as funds projects to bring existing City infrastructure up to current engineering standards. This program often provides matching funds to grant-funded projects to improve pedestrian and bicycle mobility while observing ADA requirements. Projects funded by this program are often identified through resident identified safety concerns, the Collision Reduction Program, the Crosswalk Management Program, Road Safety Audits or the Mobility Implementation Plan.
