maintaining the original project objectives. Due to the length and cost of needed improvements to the overall corridor (5.5 miles), a public engagement process was conducted to develop a scope, pre-design and construction phasing plans for the full corridor. This work and the full implementation of the first phase, completed in 2013, was funded by CIP Plan No. PW-R-141. The ultimate corridor improvement project is intended to provide a consistent shoulder on the east side, a 10.5' northbound vehicle travel lane, a 10' wide southbound vehicle travel lane, a primarily 10' wide multi-purpose trail, and a 2' or 5' wide landscape buffer where space is available. Pedestrian crossings were identified for SE 26th St, Northup Way, NE 24th St, and 5 other locations along the parkway. A signal may be installed at SE 34th St. The project will also make s	e nt 4'
drainage, water quality and fish passage improvements as needed throughout the corridor. Rationale	
This project began with the work completed in a joint (Bellevue, Redmond, King County) West Lake Sammamish Parkway Study completed in 1996. Growing traffic volumes and Bellevue's annexation of the long, southern segment of this road provided the impetus for reevaluat the roadway and potential improvements. A new analysis of possible treatments to the Parkway between I-90 and the north Bellevue / Redmond city limits was completed in 2005. The analysis included extensive community outreach and facilitation of public involvement i development of a preferred conceptual design. Alternatives were developed and analyzed with consideration given to traffic engineering principles, intersection treatments, traffic management, pedestrian and bicycle facilities, private property access, parking, storm drainage water quality, environmental issues, and existing topographic features such as steep slopes and maintaining native vegetation. The 2009 City of Bellevue Pedestrian and Bicycle Transportation Plan Update identifies improvements to this corridor as a high priority.	ing the and
A project specific environmental determination will be made in conjunction with the final design for this this phase of the project.	-
Operating Budget Impacts	
Operating costs for this project will be determined during the project's design phase. Project Map Schedule of Activities	
Project Activities From - To Amount	<u> </u>
Project Costs 2018 - 2021 8,000	,000
