Eastgate Transportation Study –

VISSIM Network Modeling Assumptions

Client: City of Bellevue
Project: Bellevue Eastgate Transportation Study
Subject: VISSIM Model Network Assumptions
Submit to: Kevin McDonald, Jeremy Chin, Shuming Yan, Sean Wellander
Cc: Xiaoping Zhang
Submitted by: Tony Woody, Yuan Wen
Date: October 30, 2018

VISSIM Model Calibration Assumptions

- The study areas for PM and AM peaks are shown in Figure 1 and Figure 2, respectively.
- Only I-90 freeway mainline upstream and downstream, near the ramps, will be modeled.
- Reduced speed area within VISSIM will be used to model the interface between the local and freeway transportation network. Estimated speed profiles used at the interface will be determined from historical WSDOT loop detector data. The approximate locations of the reduced speed area are shown in Figure 1.
- The data used to estimate the freeway mainline speed profile for each model are listed below:
 - 2018 Existing models: Washington State Transportation Center (UW TRAC) loop data
 - 2024 and 2035 future no-build and build models: WSDOT Peak-use shoulder lane (PUSL) models speed profile output
- Simulation Period: 7,200 second (2-hour period)
 - 0 – 1,800 seconds (first 30 minutes): seeding time (traffic demand assumed to 95% of peak hour demand)
 - 1,800 – 5,400 seconds (peak analysis hour): evaluation period
 - 5,400 – 7,200 seconds (extend 30 minutes after peak): extended peak - *Not measured, potentially used in future if peak spreading occurs.*

		C1102	Transit only ramps, remove HOV left turns at intersection	<ul style="list-style-type: none">Additional analysis required to determine impacts of HOV traffic rerouting from ramps	Not Recommended
139 th Ave. SE & SE 32 nd Street	<ul style="list-style-type: none">Intersection V/C exceeds MMA Standard (0.90)	C1201	Construct signal	<ul style="list-style-type: none">Adds vehicle capacity	Recommended Project C
Somerset Boulevard-Allen Road & Newport Way	<ul style="list-style-type: none">Intersection experiences congestion	C1301	Align Somerset and Allen Road to consolidate the two adjacent intersections into a single signalized intersection	<ul style="list-style-type: none">Provides similar vehicle operational benefits to expected 2035 Baseline	Not Recommended

Appendix E

Benefit/Cost and MMLOS Analysis

Neighborhood
Congestion
Reduction

BENEFIT/COST AND MMLOS METHODS AND RESULTS

A key evaluation metric was the traffic congestion reduction benefit relative to the cost of the project. Each of the project concepts was also evaluated using metrics, standards, and guidelines for all modes to ensure that congestion relief does not come at the expense of pedestrian, bicycle, and transit mobility. This Appendix summarizes the methods and results of these two analyses.

Benefit/Cost Analysis

A calculation of the traffic congestion reduction benefit relative to project cost was performed to evaluate project concept packages and the individual project concepts. This section describes how the benefit/cost analysis was calculated and presents the conclusions of the analysis.

Traffic Congestion Relief Benefit

Using the output of the traffic analysis models, vehicle hours of delay (VHD) was calculated for the 2035 baseline (embedded with currently funded projects) and for the project concepts. The difference between the 2035 baseline VHD and the project concept VHD is the delay savings (traffic congestion reduction benefit) for each project concept. Note that VHD was calculated for project concept packages along the two corridors in the study area: 148th - 150th Avenue SE between SE 28th Street and SE Newport Way and Factoria Boulevard SE between SE 32nd Street and SE 38th Street. VHD was also calculated individually for each of the projects that make up the concept packages and for the other isolated intersection projects.

To calculate the benefit/cost ratio, the VHD was divided by the project cost per \$1 million to develop a ratio of benefit to cost:

$$\frac{\text{Vehicle Hours of Delay}}{\text{Project Concept Cost \$M}} = \text{Benefit to Cost Ratio}$$

The results of the benefit/cost calculations are presented in **Table E-1**. In addition to the benefit/cost ratios, the project team considered the total congestion relief benefit that would be achieved by the different project concepts. Using both the benefit/cost ratio and the total traffic congestion reduction reveals a more holistic evaluation of both value per dollar and total congestion reduction.

Evaluating Project Concepts through a Multimodal Lens

The Transportation Commission's Multimodal Level of Service (MMLOS) final report describes the recommended metrics, standards and guidelines for facilities that support people walking, riding a bicycle, using the transit system, or driving. The vehicle level of service standards and guidelines have been used to identify traffic congestion issues and potential traffic congestion reduction projects. To complement this vehicle LOS analysis, a LOS analysis for pedestrian,

bicycle, and transit was also prepared for each of the potential traffic congestion reduction projects. This analysis was prepared by evaluating whether the traffic congestion reduction project could:

- 1) Construct the MMLOS identified pedestrian, bicycle, and transit facilities along the project frontage, or
- 2) Leave sufficient right-of-way that future development could construct the MMLOS identified infrastructure

Criteria 1 above was triggered if the traffic congestion reduction project would require reconstruction of a curb/sidewalk or removal of a bicycle facility to accommodate the additional vehicle capacity. Criteria 2 was applied for all other conditions.

The results of the MMLOS analysis indicate that all recommended traffic congestion reduction projects either meet MMLOS standards/guidelines, provide sufficient right-of-way for future implementation, or would require implementation as part of future land redevelopment. **Table E-2** provides the detailed results of the MMLOS analysis.

Table E-2. Project MMLOS Evaluation

						MMLOS Standard/Guideline			
Intersection	ID	Project Description	MMLOS Standard Built?	If Not, Could be Built Later?	Crossing Distance Widened?	Sidewalks Needed	Pedestrian Crossing Needed	Bike Facilities Needed	MMLOS Evaluation
148th - 150th Avenue SE / SE Eastgate Way	C101	Add NB 2x Left, Extend SB Left turn lane	Not Impacted	Yes	Yes	Activity Center - 16 ft.	Activity Center - Enhanced	LOS 1 on 150th Ave SE N/O SE Eastgate Way - None needed, 8 ft. attached trail/sidewalk on east side of 150th Ave SE (Not up to current code, but not impacted by this project nor precluded from any future construction); LOS 3 on SE Eastgate Way - Striped bike lane (5 ft.) planned W/O 150th Ave SE; not precluded E/O 150th Ave SE.	Current designs maintain porkchop, if removed - would widen crossing distance for pedestrians - mitigate with enhanced crossing; confirm planned/under construction bike intersection enhancements on Eastgate Way are not impacted; 16 foot sidewalk on SE Eastgate Way can be accommodated. No bike facilities needed on 150th Ave SE at this time - construct LOS 1 facilities (widen multiuse trail on east side of 150th) in future; adequate ROW exists for future 12 foot multiuse path.
148th -150th Avenue SE / SE Eastgate Way	C102	C101 + Add SB Through lane from north of Eastgate to south of intersection	Not Impacted	Yes	Yes	Activity Center - 16 ft.	Activity Center - Enhanced	LOS 1 on 150th Ave SE N/O SE Eastgate Way - None needed, 8 ft. attached trail/sidewalk on east side of 150th (Not up to current City code, but not impacted by this project nor precluded from any future construction); LOS 3 on SE Eastgate Way - Striped bike lane (5 ft.) planned W/O 150th Ave SE; not precluded E/O 150th Ave SE.	Pork chop removal would widen crossing distance for pedestrians - mitigate with enhanced crossing.
148th -150th Avenue SE / SE Eastgate Way	C110	Add NBR turn pocket	Not Impacted	Yes		Activity Center - 16 ft.	Activity Center - Enhanced	LOS 1 on 150th Ave SE - None needed, existing trail	Overpass area, no MMLOS impacts or enhancements needed; path on west side of bridge could benefit from being wider if the overpass is ever reconstructed.
150th Avenue SE / SE 37th Street	C201	Add 2x EBR, Extend SB left turn pocket, Extend SB through lane from loop ramp to 38th	Not Impacted	Yes		Activity Center - 16 ft.; Assume construction per City standards with redevelopment	Activity Center - Enhanced	LOS 1 on 150th Ave SE N/O intersection - not impacted or precluded; S/O intersection LOS 2 = protected bike facilities (not impacted or precluded by this project); LOS 1 on SE 37th St - planned for construction as part of Mountains to Sound Trail, not impacted or precluded	There is not adequate right of way today to accommodate the pedestrian MMLOS standard of 16 ft sidewalks. The congestion relief project will only occur with redevelopment, at which time sidewalks will be constructed by the developer. The bike MMLOS is not impacted or precluded on 150th Ave SE north or south of the intersection. The Mountains to Sound Trail will accommodate the LOS 1 on SE 37th St.
150th Avenue SE / SE 37th Street	C202	Restrict EBL turn	Not Impacted	Yes		Activity Center - 16 ft.	Activity Center - Enhanced	LOS 1 on SE 37th St - planned for construction as part of Mountains to Sound Trail, not impacted or precluded	There is adequate right of way to accommodate the eastbound left turn restriction without impacting pedestrian or bicycle level of service.
150th Avenue SE / SE 37th Street	C203	Add 2x WBL at approach, with WBR turn pocket	Not Impacted	Yes		Activity Center - 16 ft.	Activity Center - Enhanced	LOS 1 on SE 37th St - planned for construction as part of Mountains to Sound Trail, not impacted or precluded	There is adequate right of way to accommodate the additional westbound left turn pocket without impacting pedestrian or bicycle level of service.
I-90 On-Ramp / SE 37th Street	C302	Modify channelization between 150th and I-90 EB On & Signal at EB on-ramp	Yes			Activity Center - 16 ft. on SE 37th	Activity Center - Enhanced	LOS 1 on SE 37th St - planned for construction as part of Mountains to Sound Trail, not impacted or precluded	On SE 37th St, the planned Mountains to Sound trail accommodates the LOS 1 bike MMLOS standard. Project elements do not impact or preclude components of the Mountains to Sound trail. SE 37th Street is located in an activity center, which requires a 16 ft sidewalk. There is not adequate right of way today to accommodate the pedestrian MMLOS standard of 16 feet sidewalks. The congestion relief project will only occur with redevelopment of the parcel on the southeast corner of the intersection, at which time 16 feet sidewalks will be constructed by the developer.
150th Avenue SE / SE 38th Street	C401	Extend NB right turn lane between 38th Street and 37th Street	Yes		Yes	Activity Center - 16 ft. on 150th and north side of 38th St, 6-8 ft. on south side of SE 38 St; Assume construction per City standards with redevelopment	Activity Center - Enhanced	LOS 2 on 150th Ave SE - not impacted or precluded	The City's bike MMLOS standard of LOS 2 on 150th Ave SE south of the intersection is not impacted or precluded by this project. The project would require 16 ft sidewalks on 150th Ave SE on the north side of SE 38th St and 6-8 ft on the south side of SE 38th St. Sidewalks will be constructed on SE 38th St E/O Factoria Blvd SE per City standards with redevelopment. The congestion relief project will only occur with redevelopment because there is not adequate right of way today.
150th Avenue SE / SE 38th Street	C402	Modify E-W split phasing to concurrent phasing	Not Impacted	Yes		Elsewhere in City - 6-8 ft.	Standard	LOS 1 on 150th Ave SE - not impacted or precluded	See above.
150th Avenue SE / SE Newport Way	C501	Add 2x Left at southbound approach to alleviate queuing spillback	Yes		Yes	Elsewhere in City - 6-8 ft.	Standard	LOS 1 on 150th Ave SE - PBL on 150th (16 ft.); LOS 3 on SE Newport Way - sharrows W/O intersection, striped bike lane E/O intersection (5 ft.); LOS 1 Bike intersection improvements on 150th Ave SE - bike signal, green solid or skip-stripe, green bike box, Dutch intersection; LOS 3 Bike intersection improvements on SE Newport Way - green cycle length, sharrow lane markings, automatic signal actuation, bike lane to left at approach to intersection	The City's MMLOS standard can be met but will require acquisition of at least five single family homes adjacent to the congestion relief project. If right of way is acquired, then the City could construct a protected bike lane using 16 ft of right of way on 150th Ave SE as well as sharrows on Newport west of intersection and a striped bike lane east of the intersection. The intersection would also need to accommodate LOS 1bike intersection improvements on 150th Ave SE, which include: bike signals, green solid or skip-stripe, green bike box, Dutch intersection; and LOS 3 Bike intersection improvements on Newport Way: green cycle length, sharrow lane markings, automatic signal actuation, bike lane to left at approach to intersection.
Factoria Boulevard SE / SE 36th Street - I-90EB Off-Ramp	C701	Add variable channelization for EB approach (1 EBT and 1 EBT/R in AM), plus EB receiving lane	Not Impacted	Yes		Activity Center - 16 ft.	Standard	LOS 1 on SE 36th St - planned for construction as part of Mountains to Sound Trail, not impacted or precluded	There is adequate right of way for the channelization improvements that would not impact nor preclude the MMLOS standard of LOS 1 on SE 36th St (planned for construction as part of Mountains to Sound Trail). The pedestrian MMLOS standard of 16 ft for detached sidewalks would not be impacted or precluded from construction.
Factoria Boulevard / SE 38th Street	C801	Add 2x WB Left (maintain right turn pocket)	Yes		Yes	Activity Center - 16 ft. - Assume construction per City standards with redevelopment	Activity Center - Enhanced	No bike facilities on SE 38th St E/O SE Factoria Blvd	Sidewalks will be constructed on 38th St E/O SE Factoria Blvd per City standards with redevelopment. The congestion relief project will only occur with redevelopment because there is not adequate right of way today.
Factoria Boulevard / SE 38th Street	C802	Additional channelization mods (EB 2x Left exclusive)	Yes		Yes	Activity Center - 16 ft. - Assume construction per City standards with redevelopment	Activity Center - Enhanced	LOS 3 on SE 38th St W/O SE Factoria Blvd - Sharrow lane marking or no marking (30 mph and <15k)	There is adequate right of way to meet MMLOS standard of LOS 3 on SE 38th St west of SE Factoria Boulevard with a sharrow lane marking or no marking. The project will not impact nor preclude future construction of 16 ft sidewalks per the activity center standard.
SE Eastgate Way / SE 37th Street	C901	Add signal and modify channelization	Yes			Elsewhere in City - 6-8 ft.	Standard	LOS 3 on SE 35th Pl - no marking or shared marking (north leg; 25 mph, >7k) LOS 3 on SE Eastgate Way - Sharrow lane marking or no marking (west leg; 30 mph, <15k), LOS 1 on SE 37th St (Mountains to Sound Trail)	There is adequate right of way to accommodate LOS 3 on SE 35th Pl and on the west leg of SE Eastgate Way with no markings or sharrow markings. There is adequate right of way to meet the pedestrian MMLOS standard by constructing 6-8 ft sidewalks.
142nd Place SE / SE 36th Street	C1001	Add SBL and remove E crosswalk (or SBR and W crosswalk)	No	Yes	Yes	Elsewhere in City - 6-8 ft.	Standard	LOS 3 on 142nd Pl SE - Sharrow lane marking or no marking (25 mph and >7k), LOS 1 on SE 36th St (Mountains to Sound Trail)	There is adequate right of way to meet the LOS 3 bike standard on 142nd Pl SE with a sharrow or no marking. The Mountains to Sound Trail will accommodate the LOS 1 on SE 36th St. There is adequate right of way to meet the pedestrian MMLOS standard by constructing 6-8 ft sidewalks.
139th Avenue SE / SE 32nd Street	C1201	Add signal	Yes			Elsewhere in City - 6-8 ft.	Standard	LOS 3 on 139th Ave SE - striped or protected bike lane (35 mph, <25k) and SE 32nd St - no marking or sharrow lane marking (30 mph, <15k)	There is adequate right of way for project to meet the bike MMLOS standard by constructing a striped or protected bike lane on 139th Ave SE. The intersection will meet the MMLOS bike standard on SE 32nd with no marking. The project will meet the pedestrian MMLOS standard by constructing 6-8 ft sidewalks at the intersection to connect to any future sidewalks.

DRAFT - OPINION OF PROBABLE COST - EXECUTIVE SUMMARY

PROJECT: Eastgate Traffic Study

CIP NO.

DATE: 04/25/19

Project	Project Location	Cost (1000's)	Assumptions
C101	150th Ave SE - 2 SB lanes	\$ 2,380,000	Existing shoulders assumed to not be full depth pavement No bridge structure retrofit required to add additional lane, Existing shoulders assumed to not be full depth pavement
C102	150th Ave SE - 3 SB lanes	\$ 5,040,000	
C201	150th Ave SE - I-90 off ramp	\$ 1,620,000	
C203	150th Ave SE - SE 37th ST	\$ 920,000	*Frontage improvements will be completed during redevelopment for R/W and sidewalk
C302	SE 37th ST - I-90 on ramp - Signal	\$ 455,000	
C401	150th Ave SE - SE 38th ST	\$ 520,000	
C500	Newport Way - 150th Ave SE		Full takes required on 5 parcels
C701	Factoria Blvd SE - SE 36th ST		Improvements adjacent to T-Mobile, potential major utility work required, cost not reported due to unknown risk.
C801	Factoria Blvd SE - SE 38th ST - Re-stripe	\$ 175,000	*Frontage improvements will be completed during redevelopment for R/W and sidewalk, Traffic Signal duplicate from C801
C802	Factoria Blvd SE - SE 38th ST - Full Build	\$ 950,000	
C901	SE Eastgate Way and SE 37th St	\$ 1,150,000	
C1001	142nd PL SE & SE 36th ST	\$ 810,000	
C1201	139th Ave SE and SE 32nd ST	\$ 930,000	

Assumptions:

1. Estimate calculated in 2019 dollars.
2. Estimate is based on 5% Design
3. Cost estimate include design and construction costs
4. Work in the vicinity of 150th, costs assume shoulders are not full depth pavement, reconstruction taken to existing edge of traveled way
5. Drainage costs assume, detention structures are vaults or pipes

Notes

- HCM 2000 methodology used to analyze study intersections
- V/C reported for unsignalized intersections is the V/C for the worst movement
- MMA Identifiers: 8: Richards Valley; 10: Eastgate; 11: SE Bellevue; 13: Factoria
- Cells highlighted in black indicates that the intersection V/C does not meet the LOS threshold
- *Intersections not studied for the AM Peak
- **Synchro results not available for intersection due to lane configuration
- ^Degree utilization reported instead of V/C
